

Python Lists Program

Created by

Arnel Amor-II H. Oco

Program Description

This Python program demonstrates how to use Python Lists.

The user will enter several favorite subjects and the program will store them inside a list.

The program then displays the complete list, the total number of subjects entered, and the sorted version of the list.

Concepts Used

- Lists
- Variables
- User Input
- `append()`
- `len()`
- `sort()`
- Loops
- Comments

Objective

The objective of this program is to demonstrate how Python lists work and how they can store multiple values inside a single variable.

```
In [ ]: # =====  
# Program Title: Python Lists Program  
# Created by: Arnel Amor-II H. Oco  
#  
# Description:  
# This program demonstrates the use of Python Lists.  
# The user enters favorite subjects and the program  
# stores them in a list.  
# =====  
  
# Create an empty list  
subjects = []
```

```
# Ask the user for 5 favorite subjects
print("Enter your 5 favorite subjects:")

for i in range(5):
    subject = input(f"Subject {i+1}: ")
    subjects.append(subject)

# Display the complete list
print("\nYour Favorite Subjects:")
print(subjects)

# Display the total number of subjects
print("\nTotal Subjects Entered:", len(subjects))

# Sort the list alphabetically
subjects.sort()

# Display sorted list
print("\nSorted Subjects:")
print(subjects)
```

Enter your 5 favorite subjects:

Sample Output

Enter your 5 favorite subjects:

Subject 1: Math

Subject 2: Science

Subject 3: English

Subject 4: Programming

Subject 5: Chemistry

Your Favorite Subjects:

['Math', 'Science', 'English', 'Programming', 'Chemistry']

Total Subjects Entered: 5

Sorted Subjects:

['Chemistry', 'English', 'Math', 'Programming', 'Science']
